 Egypt | Open to remote work and relocation

Senior iOS Engineer and Tech Lead with 5+ years of experience shipping consumer applications and enterprise mobility SDKs. Led a team of 5 iOS engineers and delivered systems spanning offline synchronization, real-time data, payments, video, watchOS, and AI-powered features. Strong in Swift, SwiftUI, UIKit, Swift Concurrency, modular architecture, testing, and production reliability.

TECHNICAL SKILLS

iOS: Swift, SwiftUI, UIKit, Swift Concurrency, Combine, Objective-C

Architecture & Data: MVVM-C, Clean Architecture, Swift Package Manager, Core Data, SwiftData, offline-first sync

Quality & Delivery: XCTest, XCUITest, snapshot testing, Instruments, LLDB, CI/CD, Xcode Cloud, Datadog

Platforms & Integrations: REST, GraphQL, Firebase, Stripe, Apple Pay, StoreKit 2, EventKit, WatchConnectivity, AVFoundation, AVKit, WidgetKit, Live Activities

Applied AI: OpenAI and Gemini APIs, streaming with SSE, tool calling, Whisper, vision-based input

WORK EXPERIENCE

iOS Tech Lead, Sellou - Consumer App Studio & AI Incubator  02/2025 – Present | Utah, United States (Remote)

- Own iOS technical direction across **Sellou** and incubated applications; introduced CI/CD workflows that reduced release cycle time by 50%
- Designed and shipped **Spookling** with a modular Swift package architecture, streaming AI responses through SSE and mapping tool calls to EventKit actions
- Built **Plot My Calories** end to end with OpenAI Vision and Swift Concurrency, keeping networking and AI work from blocking the UI
- Rebuilt Sellou's video playback layer with AVKit and HLS, reducing playback startup time by 40% and initial download size by 20% through On-Demand Resources

iOS Team Lead, Iomob - B2B Mobility-as-a-Service Platform  02/2024 – 02/2025 | Barcelona, Spain (Remote)

- Led 5 iOS engineers delivering **LNER** and **BrightBike** while sustaining a crash-free rate above 99.9%
- Standardized CI and code reviews, improving delivery reliability and reducing technical debt
- Added Stripe tokenization to LNER, cutting checkout below 8 seconds and trip-planning latency by 35%
- Delivered BrightBike with offline map clustering and on-device receipts for unreliable networks

iOS Engineer, Iomob - B2B Mobility-as-a-Service Platform  02/2021 – 02/2024 | Barcelona, Spain (Remote)

- Built the core iOS Mobility SDK used in **Ford** and **Renfe** integrations, normalizing data from more than 10 mobility providers and reducing integration time from several weeks to under 2 days
- Moved multi-provider sync off the main thread, preserving responsive scrolling during concurrent updates
- Raised core SDK test coverage above 90% with unit and UI tests

PROJECTS

RaceMe | iOS/watchOS , *Competitive Social Running App*

- Built real-time race synchronization using Firestore and BrainCloud RTT
- Developed background Core Location tracking that recovers from suspension and supports locked-screen races
- Added an Apple Watch companion with WatchConnectivity, plus Live Activities and Dynamic Island

Revera AI | iOS/iPadOS , *Intelligent Voice Recorder & AI Transcriber*

- Built an SFSpeech/Whisper transcription pipeline with offline queuing and interruption recovery
- Cut raw upload data ~82% by converting 44.1 kHz stereo audio to 16 kHz mono
- Persisted recordings and transcripts with SwiftData, including recovery and low-storage handling

EDUCATION

B.S. Computer Science, University of Debrecen

2017 – 2020 | Debrecen, Hungary

- Graduated first in cohort | Fully funded scholarship
