SUMMARY

Senior iOS engineer and tech lead with 5+ years shipping consumer apps and enterprise mobility SDKs. Led 5 iOS engineers and shipped 11 App Store products spanning offline sync, real-time data, payments, video, watchOS and AI features. Cut release cycles 50%, video startup 40% and checkout time below 8 seconds.

TECHNICAL SKILLS

iOS & macOS: Swift, SwiftUI, UIKit, Swift Concurrency, Combine, Objective-C
Architecture & data: MVVM-C, Clean Architecture, Swift Package Manager, Core Data, SwiftData, offline-first sync
Quality & delivery: XCTest, XCUITest, snapshot testing, Instruments, LLDB, Xcode Cloud, CI/CD, Datadog
Platforms: Stripe, Apple Pay, StoreKit 2, EventKit, WatchConnectivity, AVFoundation, AVKit, WidgetKit, Live Activities
Applied AI: OpenAI and Gemini APIs, SSE streaming, tool calling, Whisper, vision input

PROFESSIONAL EXPERIENCE

Sellou — Utah, US (Remote) **02/2025 – Present**

Lead Product Engineer 08/2025 – Present

- Primary engineer on the Spookling iOS app (~87% of commits, ~51k Swift LOC): modular Swift package architecture, SSE-streamed AI responses, and model tool calls mapped through typed boundaries to EventKit actions
- Extended the product to web and AWS (AppSync, Lambda, DynamoDB, OpenSearch) for chat, search and integrations

Senior iOS Engineer / iOS Tech Lead 02/2025 – 08/2025

- Led iOS technical direction and mentored 2 engineers; introduced CI/CD that cut release cycle time by 50%
- Rebuilt video playback with AVKit/HLS: 40% faster startup, 20% smaller initial download via On-Demand Resources
- Unified deep-link and push-notification routing so every launch state resolves to the right screen
- Built Plot My Calories end to end with OpenAI Vision and Swift Concurrency, keeping AI work off the main thread

Iomob — Barcelona, Spain (Remote) **02/2021 – 02/2025**

iOS Team Lead 02/2024 – 02/2025

- Led 5 iOS engineers delivering LNER and BrightBike at a crash-free rate above 99.9%
- Added Stripe tokenization to LNER, cutting checkout below 8 seconds; reduced trip-planning latency by 35%
- Delivered BrightBike with offline map clustering and on-device receipts for unreliable networks

iOS Engineer 02/2021 – 02/2024

- Built the core iOS Mobility SDK behind Ford and Renfe integrations, normalizing 10+ providers and cutting integration time from weeks to under 2 days
- Moved multi-provider sync off the main thread, keeping scrolling smooth during concurrent updates
- Raised core SDK test coverage above 90% with unit and UI tests

PROJECTS

AgentLookout — iOS/iPadOS + macOS · App Store

- Built the iPhone/iPad app, macOS connector and relay on top of the open-source bot-crossing visualizer, with QR/code pairing and live status for coding agents across 7 tools
- Shipped it solo to the App Store; sessions are grouped by project, with agents waiting for input surfaced first

RaceMe — iOS/watchOS · solo, since 2019 · ~70k Swift LOC, 369 tests, 4 languages · App Store

- Real-time races with Firestore and BrainCloud RTT; background Core Location tracking that survives suspension
- Apple Watch companion via WatchConnectivity, plus Live Activities and Dynamic Island

Revera AI — iOS/iPadOS · App Store

- SFSpeech/Whisper transcription with offline queuing and interruption recovery; ~82% less upload data via 16 kHz mono
- Routed OpenAI through a Cloudflare Worker with allowlisted routes and usage limits, so no API key ships in the app

EDUCATION

B.S. Computer Science, University of Debrecen, Hungary · 2017 – 2020 · Graduated first in cohort, full scholarship
